USER MANUAL

INSTRUCTIONS FOR CORRECT PRODUCT CARE
for Infection Control, Safety & Product Longevity

MATTRESS CARE

MAINTENANCE

- » Regularly assess for soiling. Refer to the below cleaning instructions.
- » If the product is used directly upon or in contact with a bed surface, periodically and ongoing assess the bed surface for any sharp objects that may cause damage to the mattress cover.
- » Support Surfaces should not be lifted by the cover only. Support the foam core as well as the cover.
- » Ensure zipper remains closed at all times whilst mattress is in usage.
- » Ensure foam core is not exposed for extended periods of time to UV light.

FOAM CORE CLEANING

- » The outer covering protects the foam core, which means cleaning of the core seldom is necessary. Should the foam core need to be cleaned, clean affected area with a mild cleaning chemical and water (eg spray on).
- » Gently press out excess water.
- » Allow the foam core to dry completely in a ventilated area avoiding direct exposure to sunlight as UV light can affect foam performance.
- » Ensure that the foam core is completely dried before using mattress.

COVER CLEANING

- » Wipe off cover with an approved cleaning chemical (refer to approved chemical listing). Excrement, blood spots, spills of any kind must be removed immediately with an approved cleaning agent or soapy warm/cold water.
- » Cleaning chemical usage instructions must be followed.
- » Usage of high concentrations of Phenol-based and Chlorine chemicals and abrasive cleaning agents can have a negative impact on the integrity of the mattress fabric coatings. Forté Healthcare stipulates a maximum chlorine concentration of 1000ppm for all standard fabrics if it must be used for cleaning/disinfection.
- » All residue of cleaning agents should be completely dried from fabrics shortly after cleaning.
- » Sterilisation might have a negative effect on polyurethane coatings and is therefore not recommended. If one does decide to do so, a reduced lifetime of the product should be taken into account. This is inevitable for all thermoplastic polyurethanes, due to their chemical nature.

MANUAL HANDLING

- » The outer covering protects the foam core, which means cleaning of the core seldom is necessary. Should the foam core need to be cleaned, clean affected area with a mild cleaning chemical and water (eg spray on).
- » Gently press out excess water. Allow the foam core to dry completely in a ventilated area avoiding direct exposure to sunlight as UV light can affect foam performance.
- » Ensure that the foam core is completely dried before using mattress.

WARRANTY

- » Icon Maxx Foam Core: 5 Years
- » Premiflex Cover (Classic & Ultra): 4 Years

THERAPEUTIC WEIGHT RANGE

- » Icon Maxx 350kg: 150 - 350kg
- » Icon Maxx 500kg: 150 - 500kg

CLEANING & CARE

PREMIFLEX CLASSIC COVERS - PVC-COATED BASE FABRICS

WASHING

- » Washing (40°C or 95°C) must be done with Neutral Detergents; Softening Agents are not allowed.
- » Undyed fabrics may be washed following the ISO 6330 norm, part 9A and dyed fabrics following the ISO 6330 norm, part 3A.

DISINFECTION

In general, the PVC-coated products resist well to most of the currently used surface disinfectants. Nevertheless, we advise to test the particular surface disinfectant in advance or to contact us in case of doubts. It is not recommended to autoclave or sterilise PVC-coated products.

DRYING

- » Adequate drying is a crucial factor in the care and maintenance of coated fabrics.
- » Drying may be effected by hanging out, spinning or tumbling at temperatures up to 60°C
DO NOT press or mangle.

STORAGE

- » Store in a dry area, at room temperature.
- » Avoid excessive pressure and contact with non-colourfast materials.
- » Try not to expose the PVC-coating to excessive sunlight (UV-Radiation).

CLEANING & CARE

PREMIFLEX CLASSIC & ULTRA COVERS - PU-COATED FABRICS

WASHING

- » Washing (95°C) must be done with neutral detergents - softening agents are not allowed.
- » Undyed fabrics may be washed following the ISO 6330 norm, part 9A and dyed fabrics following the ISO 6330 norm, part 3A.
- » Premiflex covers can easily be washed > 100 times at 95°C (excluding possible physical damage of the coating due to contact with sharp metal parts in the washing machine).

DISINFECTION

In general, Premiflex covers resist extremely well to all kinds of disinfectants. Nevertheless, we advise to test the particular surface disinfectant in advance or to contact us in case of doubts. Generally, surface wiping can be done numerous times without problems with the following commonly used products:

- » Alcohol based disinfectants
- » Phenol based disinfectants
- » Disinfectants based on quaternary ammonium
- » Active chlorine based disinfectants (> 100 times 5000 ppm). Please always keep in mind to rinse the cover extensively with pure water after using chlorine.
- » Chloramine based disinfectants
- » Peroxyde based disinfectants.

STERILISATION / AUTOCLAVATION

- » Premiflex covers have the best possible resistance against autoclave sterilisation.
- » Premiflex covers have been tested and approved after 50 cycles autoclave at 134°C

DRYING

- » Adequate drying is a crucial factor in the care and maintenance of coated fabrics.
- » Drying may be effected by hanging out, spinning or tumbling at temperatures up to 130°C (inlet temperature hot air).
- » Premiflex covers have been tested and approved after 50 cycles tumbler drying at 130°C. DO NOT press or mangle.

STORAGE

- » Store in a dry area, at room temperature.
- » Avoid excessive pressure and contact with non-colourfast materials.
- » Try not to expose the PU-coating to excessive sunlight (UV-radiation).

CAUTION

- » To avoid premature degradation of the surface coating never use an abrasive cloth, sponge or other similar device on the surface. Wipe off cleaning product residue with a clean, soft cloth and rinse with fresh warm water immediately after use. *Allow the surface to dry completely before use.*
- » Cleaners/disinfectants can cause discolouration/bleaching on some colours.
To avoid discolouration, always check on a small area first.
- » Information contained here is purely related to the compatibility of cleaners with Forte cover materials and in no way relates to the efficacy of any cleaner for infection control or the safety of any cleaner for skin contact.
- » Testing information is specific to the products or formulations listed and in no way constitutes approval for other products from any brand listed without being tested.
- » All approvals are based on manufacturer recommended dilution with water unless otherwise specified and approval is void for any improper dilution.
- » If a particular cleaner/disinfectant is not listed, we advise to test the specific product in advance or contact us to conduct testing.
